CTID	ce-27f8c402-c885-4bff-9762-5df66271801d
Name	Workforce Framework for Cybersecurity (NICE Framework) Version 1.0.0
Description	The NICE Workforce Framework for Cybersecurity (NICE Framework) establishes a common lexicon that categorizes and describes cybersecurity work and what workers need to know and be able to do to complete that work. The NICE Framework is used in both public and private sectors and across industries, in support of cybersecurity career awareness, education and training, and workforce assessment, planning, and development. The NICE Framework is built on the foundational elements of Task, Knowledge, and Skill (TKS) statements, which are used to form Work Roles and Competency Areas. Work Roles are groupings of work for which individuals or teams are responsible, and are organized under higher-level groups of common cybersecurity work functions called Work Role Categories. Competency Areas are similar to Work Roles, but are primarily focused on cybersecurity learners as opposed to cybersecurity work. Whereas Work Roles include lists of associated Task, Knowledge, and Skill statements, Competency Areas are only associated with Knowledge and Skills. As of March 2024, NICE Framework Work Roles are assigned full lists of Task, Knowledge, and Skill statements along with their titles, descriptions, and identifiers. Competency Areas have titles, descriptions, and identifiers; their Knowledge and Skill are currently in development. Additionally, future revisions to the elements of the NICE Framework will specify relationships between Task statements and the Knowledge and Skill statements that are required to complete each Task.
